Editorial

We are happy to bring a new edition of TULSSAA journal after a quite long gap. Libraries and information centers have been serving as the cornerstone of knowledge, education and research in Nepal. In this changing global environment, we information managers have to keep the libraries relevant, inclusive and creative. The emergence of digital technologies has transformed the way individuals obtain and engage with information. In reaction, our libraries need to adopt digitization to ensure the information is easily accessible to the library users.

Moreover, the responsibilities of librarians have been streamlined beyond merely being caretakers of books. Contemporary librarians have to function as information experts, teachers, and technology enablers. In Nepal, incorporating library science education into the various levels of academic curriculum and offering ongoing professional development for librarians will be crucial step for enhancing the field. Enhancing library networks throughout Nepal will guarantee fair access to information and help to eliminate the digital gap.

This (Vol. 12, No. 1, Issue 15) contains various research-based articles from home and abroad. We believe such publication will be a stepping stone for the prosperity of the library education and services in Nepal. The articles in this journal seek to examine the obstacles and possibilities within library and information science in Nepal, providing insights, studies, and effective methods that can influence the future of our libraries.

Thank you
